### **DETAILED ACTION**

1. In view of an Applicant's Appeal Brief filed on January 27, 2011, PROSECUTION IS HEREBY REOPENED. A new non-final rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office Action is non-final) or a reply under 37 CFR 1.113 (if this Office Action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Overall, claims 13-31 are pending in this application.

### **Drawings**

2. The formal drawing of Figure 1 filed on May 17, 2010 has been approved for entry.

### **Claim Objections**

3. Claim 31 is objected to because on the last line of the claim, "openable" is deemed indefinite and should be changed to --opened--. Appropriate correction is required.

**Claim Rejections - 35 USC § 102**

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office Action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**5. Claim 31 is rejected under 35 U.S.C. 102(b) as being anticipated by Igarashi (U.S. Patent 5,966,928).**

As shown in Figures 1-2, Igarashi discloses a prior art having a filter (10) comprising a filter wall (11) dividing a clean gas side (24) and a raw gas side (14) of the filter and configured to separate out particles (combustible soot particles) and particle constituents (ashes) from a stream of fluid (exhaust gas) passing through the filter wall and to enable the particles to be removed in a regeneration process, wherein the filter wall forms a plurality of channels (14) on the raw gas side, each channel being closed by a closure wall (13) located downstream of at least a portion of the filter wall (11), the closure wall configured to be at least partially opened so as to enable disposal of the particle constituents (see lines 44-57 of column 1).

**Allowable Subject Matter**

6. Claims 13-30 are allowed.

**Response to Arguments**

7. Applicant's arguments with respect to the references applied in the previous Office Action have been fully considered but they are moot in view of the new ground(s) of rejection.
